

e-Research Infrastructures for e-Science

Axel Berg

SARA national HPC & e-science support center

RAMIRI, June 15, 2011

Science Park Amsterdam

a world of science in a city of inspiration

- > Faculty of Science of the “University of Amsterdam”
- > National Institute for Nuclear Physics and High Energy Physics (NIKHEF)
- > Institute for Atomic and Molecular Physics (AMOLF)
- > National Research Institute for Mathematics and Computer Science (CWI)
- > SARA national HPC & e-science support center
- > + 80 innovative companies

SARA's Mission: Support Science & Innovation

SARA Foundation is an independent (hybrid) organization with ~140 fte's in 2 locations (Amsterdam and Almere)

The mission of SARA is 2-fold:

1. Supporting research in the Netherlands by providing high-end not-for-profit ICT services to research communities
[SARA for Science & Innovation]

2. Offering commercial high-end commercial ICT services based on the expertise built in the high-end activities
[Vancis for a VANCed Ict Services]

vancis
a *SARA* company

Science Park, Amsterdam

SARA National Supercomputing Center

> SARA supports research in the Netherlands by providing high-end computing-, networking-, storage-, visualization- and e-Science support services and expertise

> These services are guaranteed by:

- deployment of integrated HPC services and infrastructure
- provision of multidisciplinary expertise and support in ICT-technology and applications
- conducting necessary innovation, engineering and development to support and sustain those services
- participation in National and International e-Science and Grid project's
- connection to and integration into international e-Infrastructures, collaboration

e-Infrastructures SARA

Huygens National Super

IBM Power 6, 3328 cores,
15.25 TB of memory,
700 TB of disk space,
60 TFlop/s

LISA National Compute Cluster

Dell cluster
4480 cores,
12 TB of memory,
20 TFlop/s

Grid Resources

2376 Cores, 3408 TB of disk,
2000 TB tape
12 BioInfo Sites Life Science Grid
High Energy Physics, Astronomy, Bio Info

Visualization

High Resolution
Tiled Panel Display
Remote Visualization

Innovative Infrastructures

Cloud
GPU
Hadoop
iRODS

Network

SURFnet 6

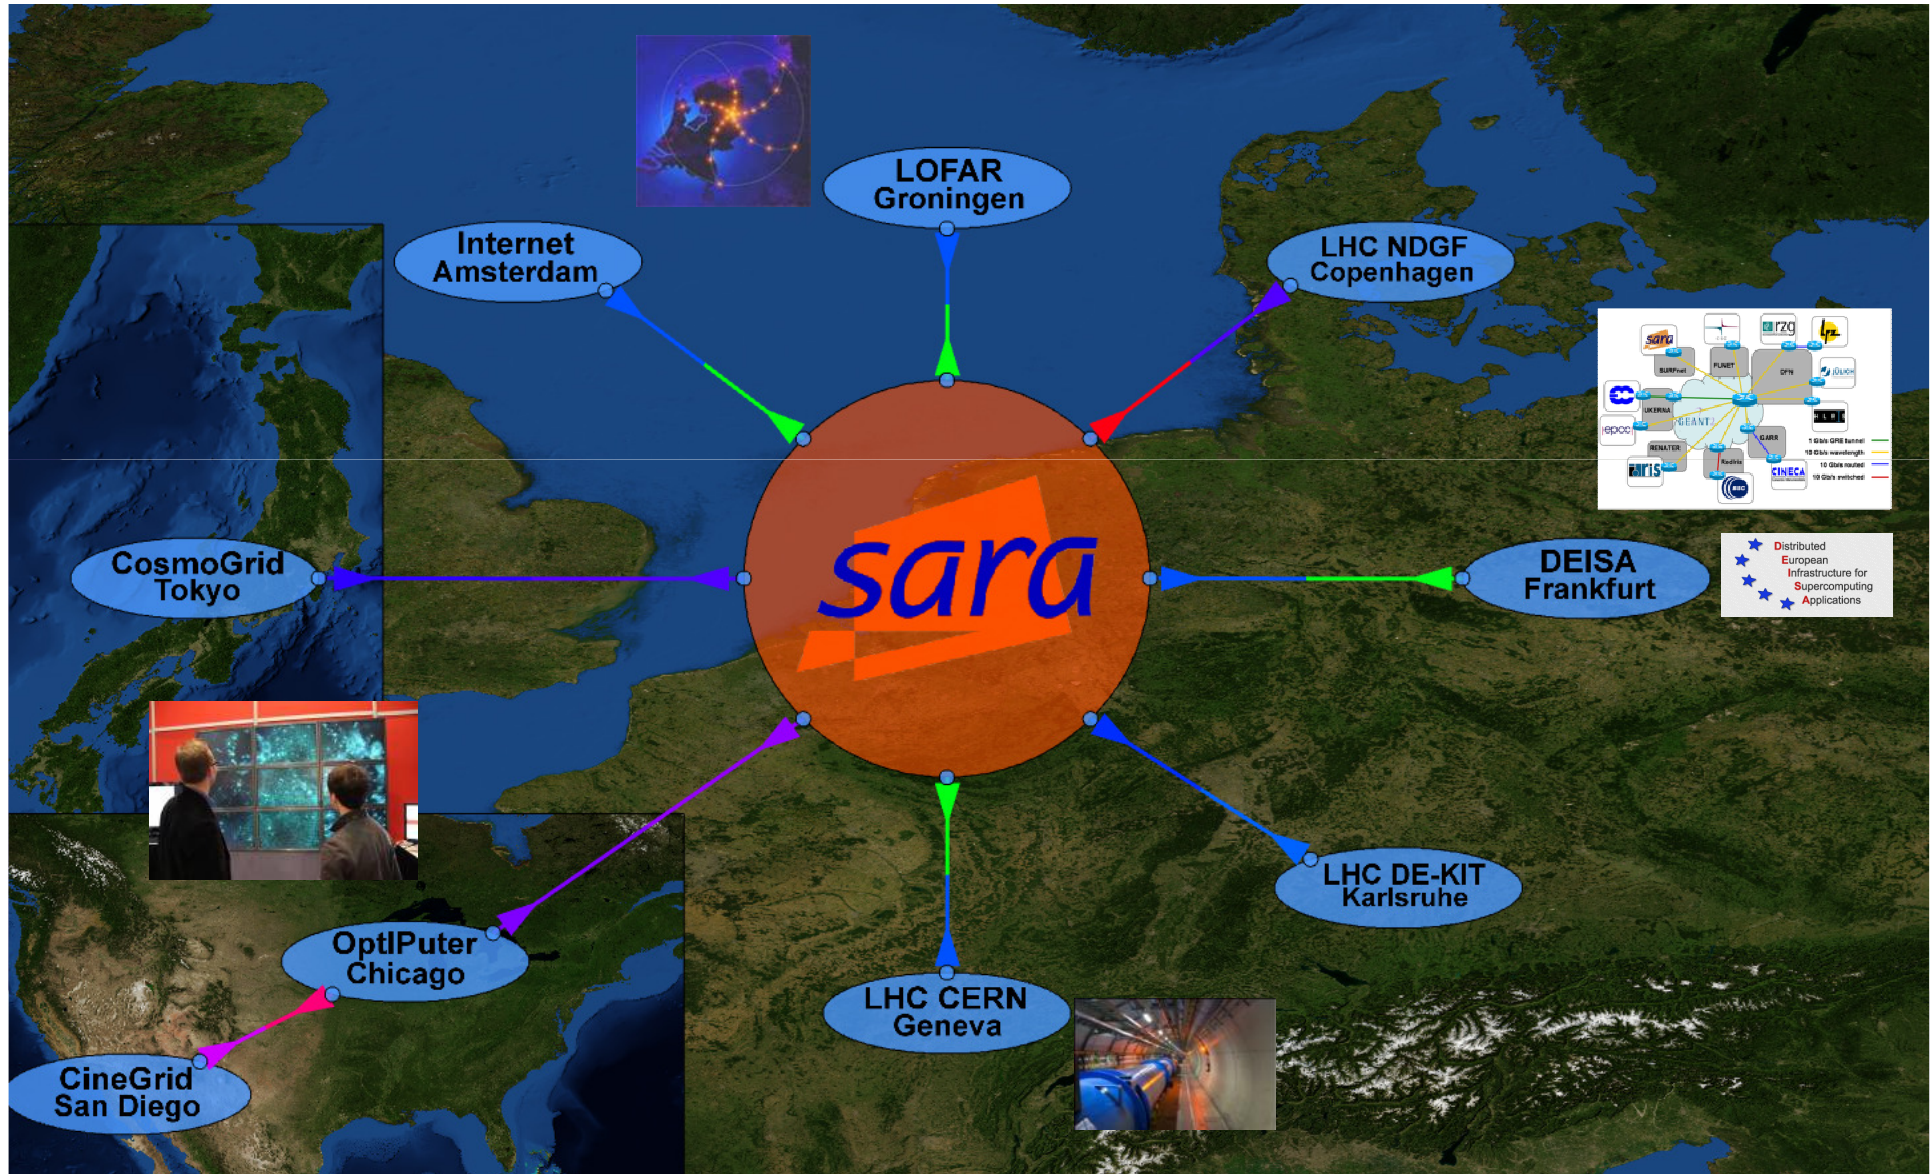

Netherlight

Connectivity is key

Advances in Society

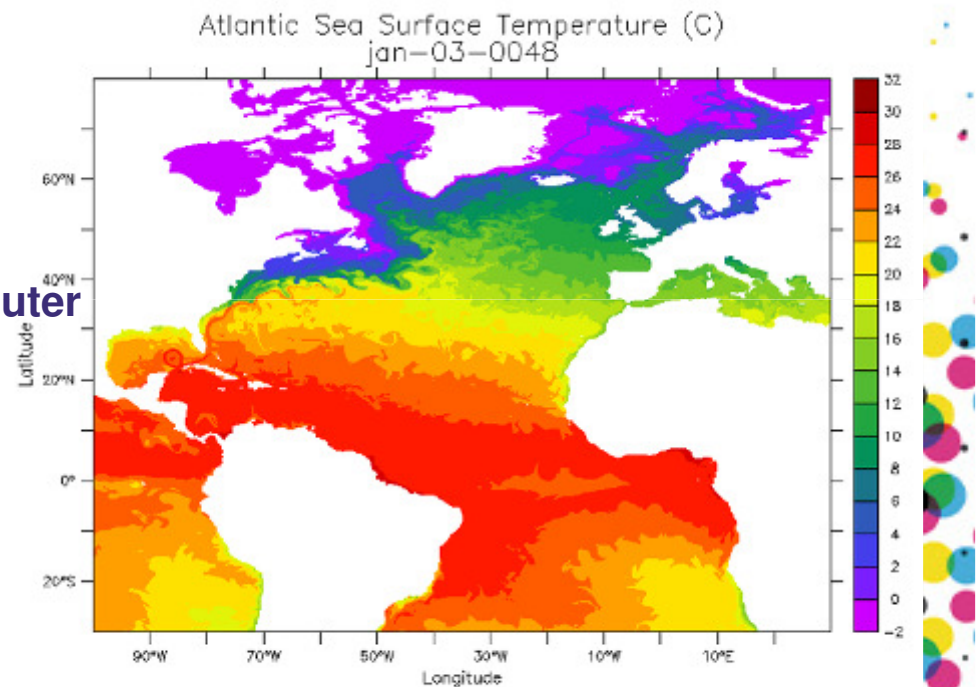

Stability of the Atlantic Meridional Overturning Circulation (SAMOC)

- > Dutch Computing Challenge Project 2008 – 2009
- > Huygens P6: 750,000 core hours
- > Ocean model resolution: 10 km (0.1 degree)
- > 1 year model simulation ~ 1 day on about 1200 cores on natl. supercomputer
- > Utrecht University, Netherlands
 - Prof. dr. ir. H.A. Dijkstra
- > Climate System Modeling Group, Los Alamos Natl. Lab., USA
 - M. Maltrud, M. Hecht, P. Jones, W. Weijer
- > **Simulation data produced: > 100 TB**

Science towards Exascale

- > Scientific experiments and data-intensive computing generate today *exabytes* of data
 - > Driven by e.g. detector and HW developments
 - Increased resolution, automation & robotization
- | | |
|--------------------------|----------------------------------|
| Medical imaging (fMRI): | ~ 1 GByte per measurement |
| Satellite world imagery: | ~ 5 TByte /year |
| Climate modelling: | 100 TB per simulation |
| Astronomy LOFAR: | >2,5 PByte per year |
| LHC physics: | 10-30 PByte per year |
- > Entering new area of science at Petascale/Exascale level: more than just evolutionary approach will be needed

High Throughput Data Analysis for the Large Hadron Collider (CERN)

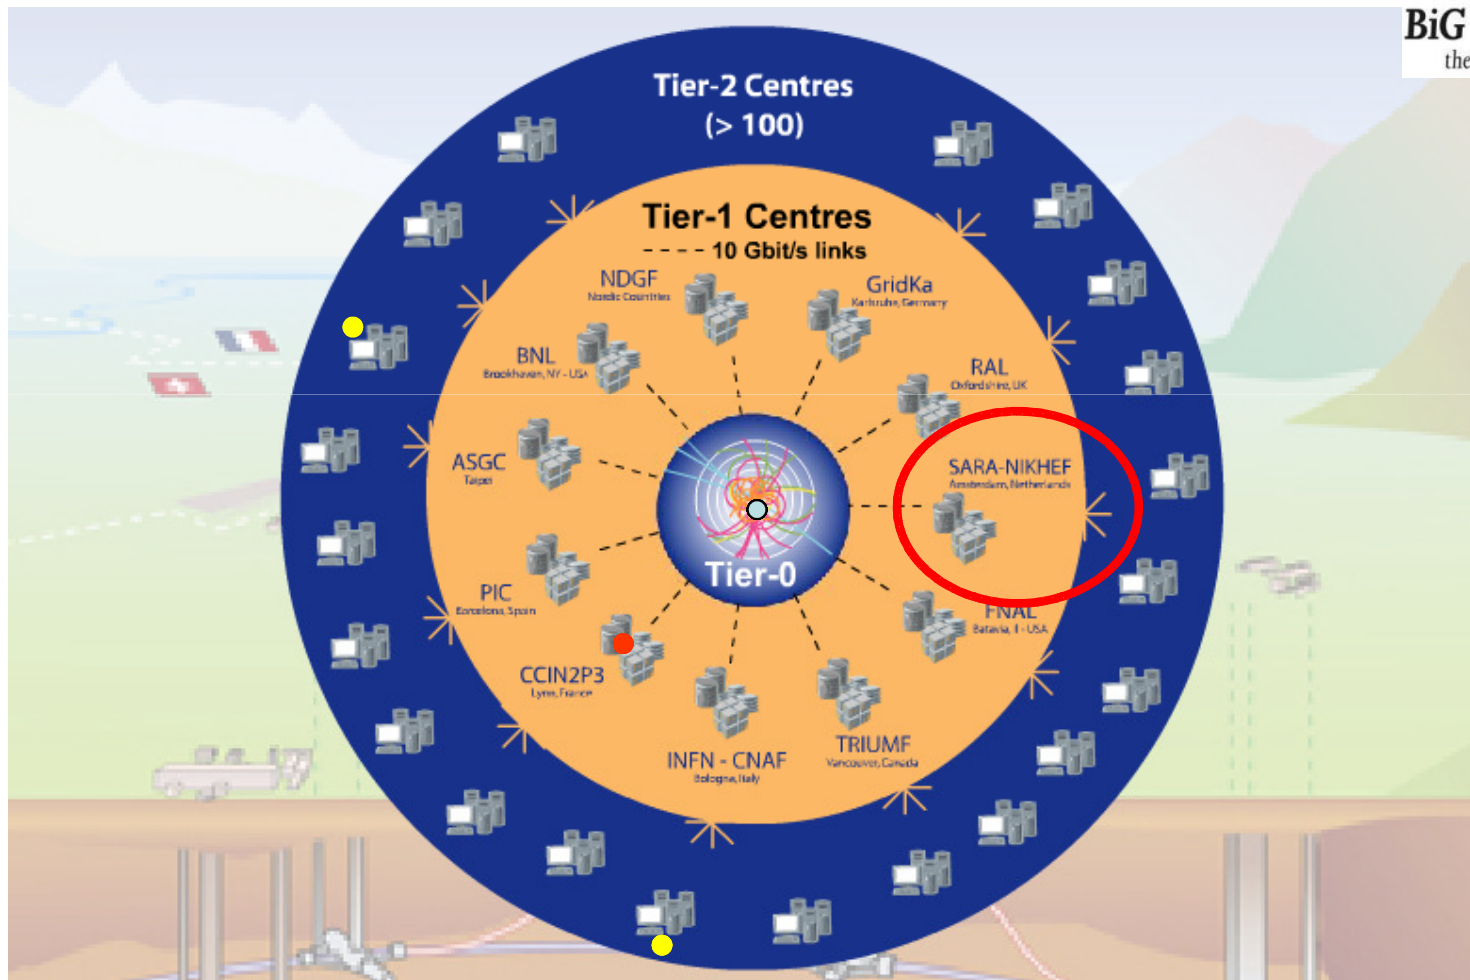

SARA & NIKHEF receive, store and analyze 10% of all LHC data

facilities

Our vision is a scientific e-infrastructure that supports seamless access, use, reuse, and trust of data. In a sense, the physical and technical infrastructure becomes invisible and the data themselves become the infrastructure – a valuable asset, on which science, technology, the economy and society can advance.

Report of the High-level Experts Group – Riding the wave (2010)

Open Access and Permanent Access

- > **Open access to scientific information and data**
- > Significant difference between '**Open Access to research results**' and '**Permanent Access to research data**'
- > Permanent Access can be addressed at a technical, operational and funding level
- > Open Access is policy-based and primarily the issue of the data owners
- > Service providers can facilitate services that enable policy-based access

To take home part 1

- > **Data explosion in science (experimental sciences & data-intensive computing); data is generated centrally and/or distributed**
- > **Scientific communities are getting organized and are global, and so are e-infrastructures (PRACE, EGI, GEANT, Eudat)**
- > **Research requires a tightly integrated e-infrastructure service that contains all elements (compute, storage, network, visualization, support)**
- > **Next PRACE Research Infrastructure as an example**
